

FOR IMMEDIATE RELEASE

## **MFG Named Certified Partner by Oracle Corporation**

**SOMERSET, New Jersey, September 24, 2003** – MFG Systems Corporation announced today that the company has met the requirements to become a Certified Partner in the Oracle Partner Network joining a select number of companies that have reached this level of achievement. MFG Systems was able to advance to Certified Partner level due to its abilities with and focus on the Oracle product set. The higher level of partnership also allows MFG to work more closely with Oracle Corporation to promote Oracle technology solutions when conducting joint marketing events as well as when selling to specific accounts.

"The upgrade of our partnership with Oracle Corporation to Certified Partner level is a reflection of the success of the fifteen year relationship between MFG and Oracle Corporation," said Frank Magno, President of MFG Systems.

Customers can be assured that by meeting the requirements for Certified Partner status, MFG has demonstrated that the company is able to provide a high level of service and support to current or prospective Oracle customers. Oracle requires Certified Partners to meet certain marketing criteria, provide client references and case studies, achieve certain revenue targets and maintain a number of certified Sales and Technical resources on staff.

"I'd like to congratulate Frank and the entire MFG team on a job well done. MFG has long been known as an Oracle centric VAR and this certification further validates their quest to become a major force on the Oracle technology field." - Fred Ball, Account Development Manager, Avnet Hall-Mark

###

### **About MFG**

MFG Systems combines the leadership and expertise relied upon by the Oracle community with a proven track record in business-critical enterprise IT environments to deliver business solutions, including database services, application development, support, software products and training. MFG's expertise lies in all areas of Oracle competency with specialists in various complementary technologies including Java, XML, Oracle 9ias, Business Intelligence, Portal and Perl for a wide variety of industries including pharmaceutical, chemical, manufacturing and financial. MFG also provides on-site and remote database Administration services through our dbGuardian™ service offering. In Addition, our AppsGuardian™ service provides on-site application support for our clients as well as remote application support services.
